

## Custom Gas Detection Services by Honeywell Analytics

You want a gas detection system that works the way you need it to, one that enhances safety and operational efficiency and productivity. Let Honeywell Analytics' custom design engineers help you achieve your unique system requirements. With a track record that includes hundreds of successful custom design projects, we will evaluate your site requirements, infrastructural resources and budget to create a cost-effective custom build. Rely on the proven expertise of Honeywell Analytics' Custom Design Engineering team to protect people, performance and profitability.

### Services Offered

- Treat/condition gas samples
- Pull samples through aspiration
- Combine gas monitoring with annunciation
- Add custom visualization hardware and software
- Link all elements of a custom system to a central control HMI or SCADA
- Collect info from gas transmitters in remote or hard to access areas
- Retrofit multi-point installations for advanced troubleshooting and diagnostic ease
- Monitor temperature outputs and other environmental conditions
- Engineer system improvements that cut maintenance and energy costs
- Integrate hardware and software components into a complete package

### Expert Design Team at Your Service

- Product design engineers and integration specialists average 20+ years per individual
- Ability to machine parts to precise specifications
- Built for extreme environments
- Reliable, affordable and available
