Safety Information: Read First

WARNING
1. Substitution of components may impair Intrinsic Safety.
2. BW recommends performing a bump test prior to each day’s use to confirm sensor response and alarm activation by exposing the detector to a concentration of target gas that exceeds the low alarm set point. BW also recommends performing a bump test if the detector has been subjected to physical impact, liquid immersion, an Over Limit alarm event, custody changes, or anytime the detectors performance is in doubt. Calibrate the detector after a failed bump test. Always bump test and calibrate in a fresh air environment.
3. Detectors in hibernation mode are not functional.

CAUTION
1. Activate the detector before the activation date on the package.
2. This product is a gas detector, not a measurement device.
3. Ensure that the sensor grill is free of dirt, debris, and is not obstructed.
4. Clean the exterior with a soft, damp cloth.
5. For optimal performance, periodically zero the sensor in a normal atmosphere (20.9% v/v O₂) that is free of hazardous gas.
6. Portable safety gas detectors are life safety devices. Accuracy of ambient gas reading(s) is dependent upon factors such as accuracy of the calibration gas standard used for calibration and frequency of calibration. BW recommends performing a calibration at least once every 180 days (6 months).

Informations de sécurité – À lire au préalable

AVERTISSEMENT
1. Le remplacement d’un composant de l’appareil peut compromettre la sécurité intrinsèque du détecteur.
2. Avant chaque utilisation quotidienne, BW recommande d’effectuer un test fonctionnel afin de vérifier la réaction du capteur et l’activation de l’alarme, en exposant le détecteur à une concentration de gaz cible supérieure au seuil d’alarme basse. BW recommande également d’effectuer un test fonctionnel si le détecteur a été soumis à un impact physique, à une immersion dans du liquide, à un événement d’alarme Dépassement de la limite, à des changements d’utilisateur ou chaque fois que les performances du détecteur sont mises en doute. Étalonnez le détecteur après l’échec d’un test fonctionnel. Effectuez toujours un test fonctionnel et étalonnez dans un environnement avec de l’air frais.
3. Détecteurs en mode veille prolongée ne sont pas fonctionnels.

MISE EN GARDE
1. Activer le détecteur avant la date d’activation sur l’emballage.
2. Ce produit est un détecteur de gaz, pas un dispositif de mesure.
3. Veillez à assurer que la grille du capteur est exempte de saleté, les débris, et ne soit pas obstrué.
5. Pour des performances optimales, zéro périodiquement le capteur dans une atmosphère normale (20.9% v/v O₂) qui est exempte de gaz dangereux.
6. Les détecteurs portables de gaz de sécurité sont des dispositifs de sécurité des personnes. La précision des valeurs de gaz ambiant dépend de divers facteurs, tels que la précision de la norme de gaz d’étalonnage utilisée pour l’étalonnage et la fréquence d’étalonnage. BW recommande d’effectuer un étalonnage au moins une fois tous les 180 jours (6 mois).
**Activate a New Detector**

1. Move to a normal atmosphere (20.9% v/v O₂) that is free of hazardous gas.
2. Press and hold the pushbutton until a 5 second countdown is displayed, and then continue to hold until the countdown is complete.
3. When the countdown is complete, the LCD and LEDs turn on and then turn off. The detector performs an internal diagnostic test.
4. When the diagnostic test is successful, the alarm setpoints are displayed and the LEDs flash.
5. The sensor stabilization countdown is displayed. During the countdown, the detector vibrates continuously for 20 seconds. The time required to stabilize varies depending on sensor type. When the countdown reaches 0, the LEDs flash and the audible alarm beeps.
6. The detector is in normal operating mode when the gas type and concentration are displayed.

**Normal Operating Mode**

When the detector is in normal operating mode, the type of gas detected is permanently displayed. The detected concentration of the gas is displayed until it is disrupted by a pushbutton action, gas alarm, or error event.

**Operating Life**

When the detector is activated for the first time, the operating life countdown is displayed. Press the pushbutton to display remaining operating life.

- **90 Days or Less Remaining**
  - When the operating life countdown reaches 90 days or less before expiry, the countdown display changes to days. The countdown displays the remaining operating life in days until the countdown reaches 24 hours or less before expiry.

- **24 Hours or Less Remaining**
  - When the operating life countdown reaches 24 hours or less before expiry, the countdown display changes to hours, and the EXPIRY! warning and non-compliance symbol are displayed.

- **End of Operating Life**
  - When the operating life countdown ends, the detector deactivates and detector safety functions are disabled. It is possible to retrieve event logs for a limited time after expiry. The EXPIRY! warning and non-compliance symbol are displayed for up to 30 days after expiry.

**Internal Diagnostic Tests**

Activated detectors automatically perform one internal diagnostic test every 24 hours. If the internal diagnostic test fails, the diagnostic fail-safe begins.

**Diagnostic Fail-Safe**

1. The EXPIRY! warning and non-compliance symbol are displayed.
2. The detector beeps and vibrates.
3. The LEDs flash 2 times per second for 15 seconds.
4. OFF or an error code is displayed. The detector is deactivated.

It is possible to retrieve the event logs for a limited time after expiry. If you are unable to retrieve the event logs, contact BW.

**Alarms and Warnings**

An alarm is initiated when the sensor is exposed to a gas concentration that exceeds alarm setpoints. The alarm persists until the alarm gas concentration returns to an acceptable range. Battery life decreases rapidly when the detector is in alarm condition.

- **Low Alarm**
  - Audible: 1 beep per second
  - Visual: 1 flash per second
  - Vibration: 1 vibration per second

- **High Alarm**
  - Audible: 2 beeps per second
  - Visual: 2 flashes per second
  - Vibration: 2 vibrations per second

**Over-Limit and Under-Limit Alarms**

- If the gas concentration is beyond the sensor range, OL (over-limit) or -OL (under-limit) is displayed.
  - Audible: 2 beeps per second
  - Visual: 2 flashes per second
  - Vibration: 2 vibrations per second

**Automatic Zero Reminder for O₂ Models**

For O₂ models only, the Automatic Zero Reminder is displayed when more than 24 hours have elapsed since the last successful zero procedure was performed.

**Peak Readings**

The peak readings symbol is displayed when the sensor is exposed to a gas concentration that exceeds the alarm setpoints. It is no longer displayed when more than 24 hours have passed since the last alarm, or when a successful bump test is performed via an IntelliDoX or MicroDock II station.

**Non-compliance Symbol and LED Indicators**

The non-compliance warning symbol is displayed when:

- an internal diagnostic test fails;
- a bump test, calibration or zero procedure fails;
- a bump test or calibration is due, if enabled;
- the sensor is exposed to a gas concentration that exceeds alarm setpoints, if enabled.

The non-compliance warning symbol is no longer displayed when more than 24 hours have passed since the last alarm, or when a successful bump test or calibration is performed (manual calibration or via an IntelliDoX or MicroDock II station). The non-compliance warning symbol is permanently displayed when the service-life countdown reaches 24 hours or less before expiry, and for up to 30 days after expiry.

When **Non-compliance after gas exposure** is enabled through Fleet Manager II via an IntelliDoX station, the LEDs flash in an alternating pattern when the non-compliance warning symbol is displayed. When the symbol is first displayed, the top LEDs flash. After 30 seconds, the side LEDs flash. After 30 seconds, the pattern repeats until the non-compliance warning symbol is no longer displayed.

**Recall Events and Settings**

When the detector is in normal operating mode, press the pushbutton at any time to scroll through events and settings that are not empty or disabled through Fleet Manager II via an IntelliDoX station. BW Clip Real Time flashes, vibrates and beeps.

While an event or setting is displayed, press the pushbutton to scroll to the next available event or setting. If you do not press the pushbutton, or if you have reached the last available event or setting, the detector returns to normal operation. Events and settings are displayed in this order:

1. **Peak Reading**, if available, and when a maximum gas exposure event has occurred within the past 24 hours.
2. **Time of Peak Reading**, if Real-time Clock display is enabled.
3. **Operating Life**, the remaining operating life of the detector in months, days or hours.
4. **Low Alarm Setpoint**
5. **High Alarm Setpoint**
6. **Real-time Clock**, if enabled.
7. **Firmware Version**
8. **Next Bump Due**, if enabled.
9. **Next Calibration Due**, if enabled.
10. **Hibernation**, for 2-year H₂S and CO models only.
Zero the Sensor
Over time and through use, the sensor baseline at zero exposure may drift from the manufacturer’s baseline. For optimal performance of O₂ models, BW recommends that you zero the O₂ sensor once every 24 hours or when the Automatic Zero Reminder is displayed. For all other models, BW recommends that you zero the sensor periodically.

Zero Procedure
1. Move to a normal atmosphere (20.9% v/v O₂) that is free of hazardous gas.
2. Press and hold the pushbutton until a 5 second countdown is displayed, and then continue to hold until the countdown is complete.
3. When the countdown is complete, the Zero procedure begins and ZERØ is displayed.
4. When ZERØ is successful, PASS and then CAL ? is displayed. Press the pushbutton to calibrate, or wait for the detector to enter normal operating mode after a 5 second countdown.
5. If ZERØ is not successful, the non-compliance LED flashes. FAIL and the non-compliance warning symbol are displayed. Press the pushbutton to acknowledge the result and return to normal operation. The non-compliance warning symbol is displayed and the non-compliance LED flashes. Perform the Zero procedure again. If the procedure fails again, contact BW.

Bump Tests
When the detector is configured to display a bump test reminder, the bump test symbol is displayed when a bump test is due. For best results, bump test the detector via an IntelliDoX or MicroDock II station. Bump tests performed via an IntelliDoX or MicroDock II station are logged as bump tests. Manual bump tests are logged as unsafe gas concentrations.

Calibration
By default, BW Clip Real Time is configured to use the following calibration gas mixtures:

- H₂S: 20 ppm balance N₂
- CO: 100 ppm balance N₂
- O₃: 20 ppm balance N₂
- O₂: 18.0 % v/v O₂

You can use Fleet Manager II software via an IntelliDoX station to change a detector’s default calibration gas mixtures. If the detector’s default calibration mixtures were changed, use the gas mixture values from Fleet Manager II to calibrate the detector.

1. Move to a normal atmosphere (20.9% v/v O₂) that is free of hazardous gas.
2. Connect the calibration hose to the gas cylinder and to the intake inlet on the calibration cap.
3. Press and hold the pushbutton until a 5 second countdown is displayed, and then continue to hold until the countdown is complete. The zero procedure begins and ZERØ is displayed. When ZERØ is successful, PASS is displayed.
4. When CAL ? is displayed, press the pushbutton to begin calibration.
5. Put the calibration cap on the sensor grill.
6. When GAS ? is displayed, apply calibration gas for two minutes at a recommended flow rate of 500 ml/min. When calibration is successful, PASS is displayed and the detector returns to normal operating mode.

Event Logs
The detector stores the last 35 events that occurred, including peak readings, bump tests, calibrations and auto zeros. Each record contains:

- detector serial number, sensor type and life-remaining;
- total number of events that have occurred;
- event type and duration;
- alarm level(s) in ppm or %;
- time elapsed since the alarm occurred in days/hours/minutes;
- duration of the alarm (minutes/seconds).

Use Fleet Manager II via an IntelliDoX or MicroDock II station to transfer event logs from the detector to a computer. When logs are transferred via an IntelliDoX station, the most recent 35 events are transferred. When logs are transferred via a MicroDock II station, the most recent 10 events are transferred.

Optional Settings
Use Fleet Manager II via an IntelliDoX station to enable the following optional settings for BW Clip Real Time detectors.

Non-compliance After Gas Exposure
When Non-compliance after gas exposure is enabled, the LEDs flash in an alternating pattern when the sensor is exposed to a gas concentration that exceeds alarm setpoints. When the gas exposure is detected, the top LEDs flash. After 30 seconds, the side LEDs flash. After 30 seconds, the pattern repeats until more than 24 hours have passed since the last alarm, or when a successful bump test is performed via an IntelliDoX or MicroDock II station.

Real-time Clock Display
When real-time Clock Display is enabled, you can display the current time by pressing the pushbutton to Recall Events and Settings, and then continuing to press the pushbutton until the time is displayed. Time may be displayed in 12-hour or 24-hour clock format.

Hibernation
Hibernation is a factory installed feature that is available for 24-month H₂S and CO detectors. When Hibernation is activated, the operating life countdown is suspended. Use Hibernation to deactivate the detector for 7 days or longer, up to a maximum of 12 months. When Hibernation is activated, all detector safety functions are disabled.

Activate Hibernation via BW Clip Real Time

1. Have ready a BW Clip Hibernation Case. To purchase a Case, contact BW or an authorized distributor.
2. Move to a normal atmosphere (20.9% v/v O₂) that is free of hazardous gas.
3. Verify that the detector is in normal operating mode.
4. Press the pushbutton to Recall Events and Settings, and then continue to press the pushbutton until Hib is displayed.
5. While Hib is displayed, press the pushbutton until a 5 second countdown is displayed.
6. While the Hibernation counter is displayed, place the detector into a BW Clip Real Time Hibernation Case and then close the case firmly. The detector enters Hibernation mode. All detector safety functions are disabled.
7. To reactivate the detector, open the case and remove the detector.

Activate Hibernation through Fleet Manager II via IntelliDoX

1. Use Fleet Manager II to activate Hibernation on Insertion via an IntelliDoX station, and then insert the detector in the configured station. The detector event logs are retrieved, and the detector enters Hibernation mode. All safety functions are disabled, and the detector may be removed from the IntelliDoX station.
2. To reactivate the detector, press and hold the pushbutton until a 5 second countdown is displayed, and then continue to hold until the LCD and LEDs turn on and off. The detector performs a self-diagnostic test. When the test is successful, the type of gas detected and the remaining operating life are displayed. The detector is in normal operating mode.
3. For more information, refer to the operator manuals for the IntelliDoX station and Fleet Manager II software version 4.2 or higher.
BW Clip Real Time

2 OR 3 YEAR H₂S, CO, O₂, SO₂ SINGLE-GAS DETECTOR

About this Publication
This publication is an operator guide for BW Clip Real Time portable single-gas detectors manufactured by BW Technologies by Honeywell. It is intended for use with the BW Clip Real Time portable single-gas detectors manufactured by BW Technologies by Honeywell. It is intended for use with the BW Clip Real Time portable single-gas detectors manufactured by BW Technologies by Honeywell.

Maximum Operating Life
24-month Detector
2 years after activation, assuming 2 minutes of alarm time per day.

Note: 24-month H₂S and CO detectors that use hibernation may extend the service period of the detector up to an additional year. The service life will end once the detector reaches 24 months of actual operation. Hibernation provides a maximum service life of 36 months.

36-month Detector
3 years after activation, assuming 1 minute of alarm time per day.

Detection Range
H₂S 0 to 100 ppm
CO 0 to 300 ppm
O₂ 0 to 25% v/v O₂
SO₂ 0 to 100 ppm

Factory Alarm Setpoints

Low Alarm
High Alarm
H₂S 10 ppm
15 ppm
CO 35 ppm
200 ppm
O₂ 19.5% v/v O₂
23.5% v/v O₂
SO₂ 5 ppm
10 ppm

Use Fleet Manager II via an IntelliDoX station to adjust alarm setpoints. For more information, refer to the operator manuals for Fleet Manager II software version 4.2 and the IntelliDoX automatic test and calibration station.

Specifications

Shelf Life
H₂S One (1) year before activation
CO One (1) year before activation
O₂ Six (6) months before activation

Instrument Weight alligator clip included 92 grams (3.2 ounces)

Instrument Dimensions alligator clip included
41 x 50 x 87 millimeters
(1.6 x 2.0 x 3.4 inches)

Operating Temperatures
H₂S -40° to +50°C (-40° to +122°F)
CO -30° to +50°C (-22° to +122°F)
O₂ -20° to +50°C (-4° to +122°F)
SO₂ -30° to +60°C (-22° to +140°F)

Internal Vibrating
Operates to -10°C (+14°F)

Operating Humidity
5% to 95% relative humidity (non-condensing)

Audible Alarm
95 dB at 10 cm (3.9 in)

Visual Alarm
Flashing, wide-angled alarm lens with red LEDs plus alarm LCD readout

Display
Liquid crystal display (LCD)

Sensor Type
Electrochemical cells

Battery
Lithium, non-replaceable

Ingress Protection
IP 66/67

Alarm Setpoints
Instant low and instant high

Calibration
To ensure accurate calibration, BW Technologies recommends using a premium-grade calibration gas approved by the National Institute of Standards and Technology (NIST). Do not use a gas cylinder beyond its expiry date. BW Technologies recommends you calibrate the detector at least once every 180 days depending on use and sensor exposure to poisons and contaminants. Calibrate only in a safe area that is free of hazardous gas.

Allowable Calibration Gas Mixtures
H₂S 5 to 50 ppm
CO 25 to 250 ppm
SO₂ 5 to 70 ppm
O₂ 5.0 % to 19.0 % v/v O₂

For O₂ detectors, perform the Zero procedure every 24 hours or when the Automatic Zero Reminder is displayed.

Intended Use
This product is classified for use in hazardous atmospheres that are not more than 21% v/v O₂

Recycling
This instrument contains a lithium battery. Do not mix with the solid waste stream. Spent batteries should be disposed of by a qualified recycler or hazardous materials handler.

CAUTION
Products may contain materials that are regulated for transportation under domestic and international hazardous goods regulations. Return product in compliance with appropriate hazardous goods regulations. Contact freight carrier for further instructions.

Limited Warranty and Limitation of Liability
BW Technologies (BW) warrants this product to be free from defects in material and workmanship under normal use and service for a period of two or three years (depending upon detector), beginning on the date of activation. 24-month H₂S and CO detectors are covered for up to an additional 12 months when hibernation is used, limited by a total of 24 months of detector operation. This Warranty is valid only if the detector is activated by the date on the package. This warranty extends only to the sale of new and unused products to the original buyer. BW’s warranty obligation is limited, at BW’s option, to the buyer promptly notifying BW of any damage or defects attributable to repair of the product by any person other than an authorized dealer, or the installation of unapproved parts on the product. The obligations set forth in this warranty are conditional on:

1) proper storage, installation, calibration, use, maintenance and compliance with the product manual instructions and any other applicable recommendations of BW.
2) the buyer promptly notifying BW of any defect and, if required, promptly making the product available for correction. No goods shall be returned to BW until receipt by the buyer of shipping instructions from BW; and
3) the right of BW to require that the buyer provide proof of purchase such as the original invoice, bill of sale or packing slip to establish that the product is within the warranty period.

The BUYER AGREES THAT THIS WARRANTY IS THE BUYER’S SOLE AND EXCLUSIVE REMEDY AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. BW SHALL NOT BE LIABLE FOR ANY SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES OR LOSSES, INCLUDING LOSS OF DATA, WHETHER ARISING FROM BREACH OF WARRANTY OR BASED ON CONTRACT, TORT OR RELIANCE OR ANY OTHER THEORY.

Since some countries or states do not allow limitation of the term of an implied warranty, or exclusion or limitation of incidental or consequential damages, the limitations and exclusions of this warranty may not apply to every buyer. If any provision of this warranty is held invalid or unenforceable by a court of competent jurisdiction, such holding will not affect the validity or enforceability of any other provisions.
