

GAS AND FLAME DETECTION SERVICES

You entrust our Gas and Flame detection with the safety of your employees.
Whose engineers will you entrust with the safe operation of your life-saving products?

Never Turn a Blind Eye to Safety

Are you fulfilling all your legal responsibilities and commitments to your employees in HSE? Whether you are responsible for managing hazardous environments or securing your plant against gas risk, it's paramount to protect the health, safety, and welfare of your workers. It's your legal obligation to make sure that the employees are protected from anything that may cause harm, effectively controlling any risks to injury or health that could arise in the workplace. Failures to comply with these requirements can have serious consequences, including fines, imprisonment, and disqualification.

Always in Control with Trained Personnel

Can you confirm that your life-saving gas detection systems are being correctly serviced by well-trained specialists? Are you confident that you are taking all the necessary safety precautions and that your paperwork is up-to-date and compliant with all industry regulations such as ATEX directives 94/9/EC and 99/92EC? The decision to use novice operators or unapproved third-party service providers can have a strong negative impact on the health and safety on your employees. Furthermore, improper maintenance of your fixed gas detectors can cost you hundreds of thousands of dollars. That's why when you entrust your maintenance and service to qualified specialists you further guarantee that your company's investments are protected. Failures to comply with these requirements can have serious consequences, including fines, imprisonment, and disqualification.

Even the Best Products Deserve Expert Maintenance

When considering a major capital investment it is critical that ongoing maintenance along with any additional service costs are budgeted for. Investing in best-in-class products is not a guarantee for flawless operational performance so to minimise any downtime and avoid HSE risks along with any possible legal implications, it is important to ensure your safety systems are commissioned, maintained and supported by the Experts.

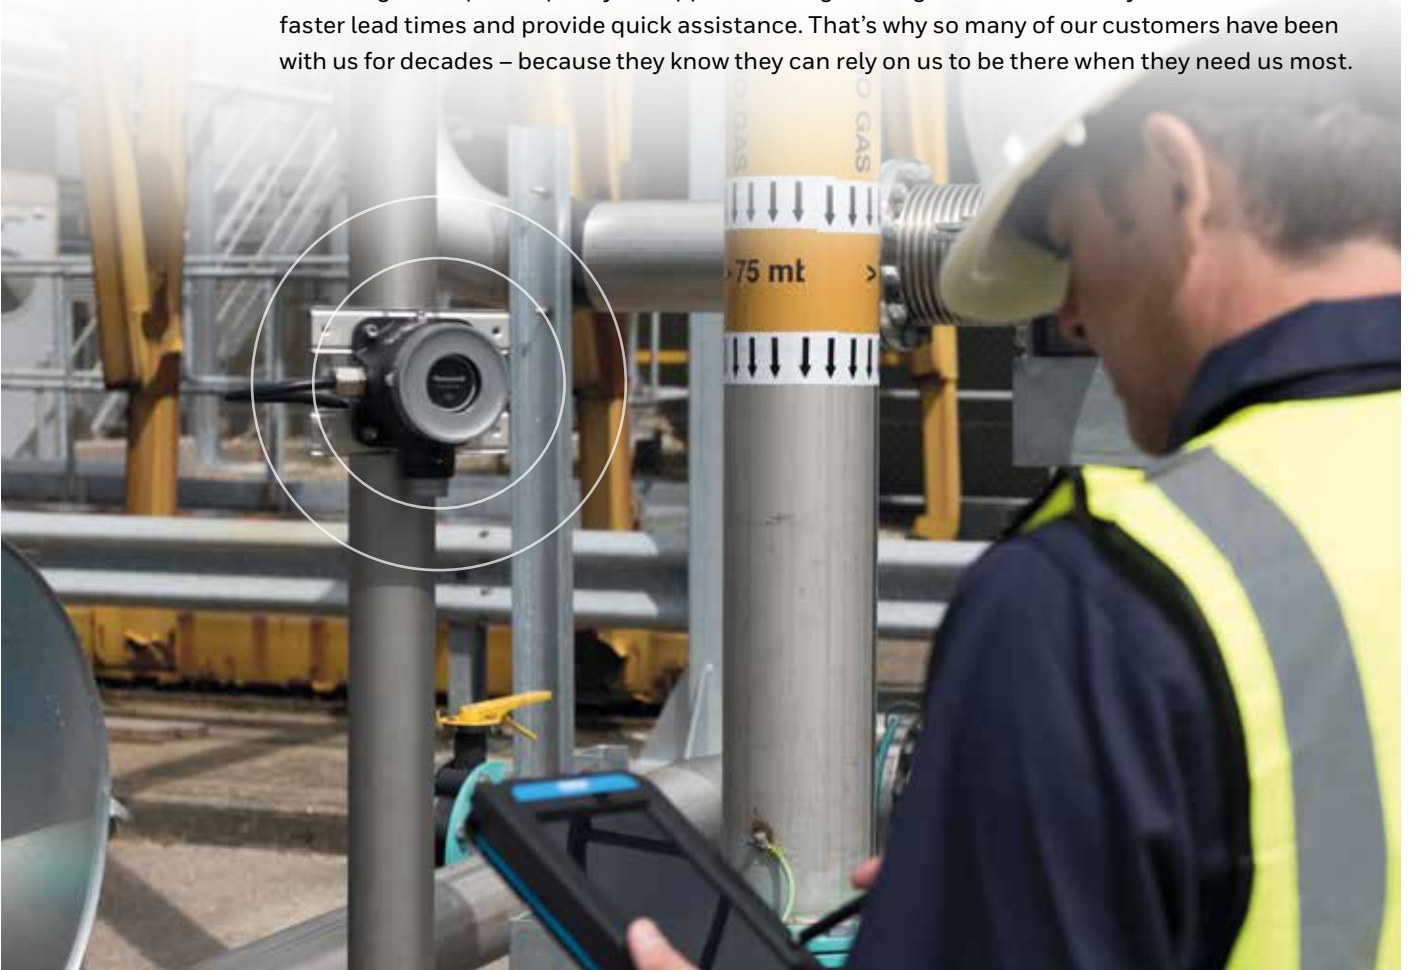

Maximize your uptime. Minimize your costs. Boost your confidence

When you choose Honeywell to be your service partner, your investment is protected threefold. First, you have the confidence that our products would meet your expectations. Second, you have the confidence that the welfare of your production processes is protected. Third, you have the confidence that, in the case of an emergency, help will arrive as quickly as possible. Every Honeywell service contract is designed to help maximize your hardware uptime while minimizing your related costs and risks to your employees' safety.

Need Reliable Service Solutions? Meet Honeywell

With over 50 years of experience in helping businesses to maximize operational safety and product uptime, Honeywell knows all the ins and outs in gas detection. We pride ourselves on delivering the superior quality of support and engineering resource. This way we can ensure faster lead times and provide quick assistance. That's why so many of our customers have been with us for decades – because they know they can rely on us to be there when they need us most.

Your Service Needs, Our Tailored Solutions
