Introduction

⚠️ Warning

To ensure personal safety, read Safety Information - Read First and the Cautions before using the detector.

The GasAlertMicroClip XT, XL and X3 (“the detector”) warns of hazardous gas at levels above user-defined alarm setpoints.

The detector is a personal safety device. It is your responsibility to respond properly to the alarm.

Table 1 lists the gases monitored.

Zeroing the Sensors

To zero the sensors, refer to steps #1-3 in Connecting to the IR Link.

ISO 9001

---

**Safety Information - Read First**

Use the detector only as specified in this guide and the operator's manual, otherwise the protection provided by the detector may be impaired.

International symbols on the detector and in this manual are explained in Table 2.

Read the **Cautions** on the following pages before using the detector.

⚠️ **Warning**

This instrument contains a lithium polymer battery. Dispose of lithium cells immediately. Do not disassemble and do not dispose of in fire. Do not mix with the solid waste stream. Spent batteries must be disposed of by a qualified recycler or hazardous materials handler.

⚠️ **Cautions**

- **Warning**: Substitution of components may impair Intrinsic Safety.
- Before using the detector, refer to Sensor Poisons and Contaminants.
- **Warning**: For safety reasons, this equipment must be operated and serviced by qualified personnel only. Read and understand the user manual completely before operating or servicing.
- Do not use the detector if it is damaged. Inspect the detector before using. Look for cracks and/or missing parts.
- If the detector is damaged or parts are missing, contact BW Technologies by Honeywell immediately.
- Only use sensor(s) that are specifically designed for the GasAlertMicroClip. Refer to Replacement Parts and Accessories.
• Calibrate the detector before first-time use and then on a regular schedule, depending on use and sensor exposure to poisons and contaminants. BW recommends calibrating at least once every 180 days (6 months).

• BW recommends to “bump test” the sensors before each day’s use to confirm their ability to respond to gas by exposing the detector to a gas concentration that exceeds the alarm setpoints. Manually verify that the audible and visual alarms are activated. Calibrate if the readings are not within the specified limits.

• BW recommends the combustible sensor be checked with a known concentration of calibration gas after any known exposure to catalyst contaminants/poisons (sulfur compounds, silicon vapors, halogenated compounds, etc).

The combustible sensor is factory calibrated to 50% LEL methane. If monitoring a different combustible gas in the % LEL range, calibrate the sensor using the appropriate gas.

• Caution: High off-scale readings may indicate an explosive concentration.

• Only the combustible gas detection portion of this instrument has been assessed for performance by CSA International.

• Protect the combustible sensor from exposure to lead compounds, silicones, and chlorinated hydrocarbons.

• Sensor exposure to certain organic vapors (such as leaded gasoline and halogenated hydrocarbons) may temporarily inhibit sensor performance. After exposure, a bump test or calibration is recommended.

• For use only in potentially explosive atmospheres where oxygen concentrations do not exceed 20.9% (v/v).

• Any rapid up-scaling reading followed by a declining or erratic reading may indicate a gas concentration beyond upper scale limit, which may be hazardous.

• Only calibrate the detector in a fresh air environment and in a safe area.

• Use only BW approved batteries for the GasAlertMicroClip detector. Refer to Specifications.

• Charge the detector before first-time use. BW recommends the detector be charged after every workday.

• Charge the detector using the recommended charging adapter only. Do not use any other charging adapter. Failure to adhere to this caution can lead to fire and/or explosion.

• Extended exposure of the detector to certain concentrations of combustible gases and air may stress a detector element that can seriously affect its performance. If an alarm occurs due to high concentration of combustible gases, calibrate the detector. If necessary, replace the sensor.

• Do not test the combustible sensor’s response with a butane cigarette lighter; doing so will damage the sensor.

• Do not expose the detector to electrical shock and/or severe continuous mechanical shock.

• Do not attempt to disassemble, adjust, or service the detector unless instructions for that procedure are provided in the technical reference guide, and/or that part is listed as a replacement part. Use only BW Technologies by Honeywell replacement parts. Refer to Replacement Parts and Accessories.

• The detector warranty will be voided if customers, personnel, or third parties damage the detector during repair attempts. Non-BW Technologies by Honeywell repair/service attempts void this warranty.

Sensor Poisons and Contaminants

Several cleaners, solvents, and lubricants can contaminate and cause permanent damage to sensors. Before using cleaners, solvents, and lubricants in close proximity to the detector sensors, read the following cautions and refer to the lists below.

⚠️ Caution

Use only the following BW Technologies by Honeywell recommended products and procedures:

- Use water based cleaners.
- Use non-alcohol based cleaners.
- Clean the exterior of the detector with a soft, damp cloth.
- Do not use soaps, polishes, or solvents.

Below are common products to avoid using around sensors.

Cleaners and Lubricants

- Brake cleaners
- Lubricants
- Rust inhibitors
- Window and glass cleaners
- Dishsoaps
- Citrus based cleaners
- Alcohol based cleaners
- Hand sanitizers
- Anionic detergents
- Methanol (fuels and antifreezes)
Silicones
- Silicone cleaners and protectants
- Silicone based adhesives, sealants, and gels
- Hand/body and medicinal creams containing silicone
- Tissues containing silicone
- Mold releasing agents
- Polishes

Aerosols
- Bug repellents and sprays
- Lubricants
- Rust inhibitors
- Window cleaners

Getting Started
The list below provides the standard items included with the detector. If the detector is damaged or parts are missing, contact the place of purchase immediately.
- Sensors: H₂S, CO, O₂, and combustible (LEL)
- Calibration cap and hose
- Charging adapter
- Printed Operator's Manual
- Supplementary Booklet, including a Quick Reference Card
- CD-ROM, including translated operator's manuals

Configuration Software: The detector is configured with Fleet Manager II software. It can be downloaded for free from BW Technologies by Honeywell website: www.gasmonitors.com.

Fleet Manager II CD-ROM is shipped with the MicroDock II base station and IR Link kit.
The detector is shipped with the sensors and rechargeable battery installed.

Battery Replacement: To replace the battery, contact BW Technologies by Honeywell. The battery can only be replaced by the manufacturer.

Charge Battery and Replace Sensors: To charge the battery and replace the sensors and/or sensor filter, refer to the following:
- Battery Cautions
- Replacing a Sensor or Sensor Filter
To order replacement parts, refer to Replacement Parts and Accessories.
To become oriented with the features and functions of the detector, refer to the following figures and tables:
- Figure 1. and Table 3. describes the detector's components.
- Figure 2. and Table 4. describes the detector's display elements.
- Table 5. describes the detector's pushbutton.

## Table 5. Pushbutton

<table>
<thead>
<tr>
<th>Pushbutton</th>
<th>Description</th>
</tr>
</thead>
</table>
| ![Pushbutton Icon](image) | - To activate the detector press ○.
- To deactivate the detector, press and hold ○ until the **OFF** countdown is complete and the LCD deactivates.
- To view the TWA, STEL, and peak (maximum) readings, press ○ twice. To clear the TWA, STEL, and peak readings, press ○ when the LCD displays **RESET**.
- To initiate calibration, deactivate the detector. Press and hold ○ while the detector performs the **OFF** countdown. Continue holding ○ while the LCD briefly deactivates. The LCD reactivates and then begins the **CAL** countdown. Release ○ when the **CAL** countdown is complete.
- To activate the backlight in normal operation, press ○.
- To acknowledge latched alarms, press ○.
- To acknowledge a low alarm and disable the audible alarm, press ○ (if the **Low Alarm Acknowledge** option is enabled). |
Activating the Detector

⚠️ Caution

Only activate the detector in a fresh air environment and in a safe area.

To activate the detector, press ✈️.

Self-Test

The following startup tests are written as startup performance is intended. If an error occurs, refer to Startup Troubleshooting.

When the detector is activated, it performs several startup tests. Confirm the following tests occur.

Battery Test

The detector performs a battery test during startup. If the battery has insufficient power to operate, the following screen displays.

Charge the battery for 2-3 hours before restarting the detector. Refer to Charging the Battery.

Audible/Visual Test

1. All of the LCD elements display simultaneously as the detector beeps, flashes, vibrates, and activates the backlight.

Detector Version

2. The current firmware version of the detector then displays on the LCD.

Startup Message

3. If data is entered in the Startup Message option (25 characters maximum) of Fleet Manager II, that data will display during the startup self-test. To enter a startup message, refer to Detector Identification or the Fleet Manager II Operator’s Manual.
**Alarm Setpoints**

4. Next, the TWA, STEL, low, and high alarm setpoints display.

*Note*

Alarm setpoints may vary by region. Refer to Factory Gas Alarm Setpoints.

---

**Sensor and Power Test**

5. The detector then tests the sensors.

After testing the sensors, the following screen displays to verify all sensors have passed.

If an error message displays, refer to Startup Troubleshooting.

*Note*

The sensors are tested continuously while the detector is activated.
Automatic Zero and $O_2$ Calibration (optional)

6. Auto-Zero on Startup: If enabled, the $H_2S$, $CO$, and LEL sensors are automatically zeroed during startup. Each sensor is enabled individually. The auto-zero option is enabled for each sensor upon shipment.

$O_2$ Auto-Calibration on Startup: If enabled, the $O_2$ sensor is automatically calibrated during startup. The auto-calibration option is enabled for the $O_2$ sensor upon shipment.

Note
If oxygen is configured to measure 20.8% vol., the oxygen calibration screen displays 20.8% $O_2$.

Calibration Due Date (optional)

7. The following screen displays the number of days remaining before calibration is due. The number of days that displays is when the next sensor calibration should be performed.

Note
If the Calibration Interval option is defined as 0, the calibration due date is bypassed during startup.
GasAlertMicroClip
Activating the Detector

Last Calibration Failed (optional)

If any sensor failed the last calibration, CAL FAILURE displays on the screen.

![CAL FAILURE]

Note

When the CAL FAILURE displays, the previous calibration has failed but the calibration is still valid until the next calibration due date.

Overdue Calibration

If any sensor is past due for calibration, the detector beeps, flashes, vibrates, and the following screen displays.

![CAL ILIE today]

Note

If calibration is not performed, or ○ is not pressed within 2 minutes, the detector automatically deactivates.

If the Force Calibration When Overdue is disabled, press ○ to acknowledge the warning. The detector continues with the startup self-tests and then enters normal operation.

Cal IR Lock

If the Cal Lock option is enabled, the following screen displays.

![IR-LOCK]

Refer to Startup Troubleshooting.

Bump Test

Note

A bump test cannot be conducted if the detector has just been calibrated. If the Bump Interval option is defined as 0 in Fleet Manager II, the bump test is bypassed.

BW recommends to “bump test” the sensors, before each day’s use, to confirm their ability to respond to gas by exposing the detector to a gas concentration that exceeds the alarm setpoints.
Last Bump Test Failed

If any sensor failed the last calibration, CAL FAILURE displays on the screen.

A bump test must be performed to enter normal operation. Apply gas to the sensors. Ensure the visual, audible, and vibrator alarms activate. When the gas is removed, the detector briefly remains in alarm until the gas has cleared from the sensors.

When the sensors successfully pass the bump check, the following screen displays showing the number of days remaining until the next bump check is due (1 \( d \) = 1 day).

Note

When the BUMPCHK FAILURE displays, the previous calibration has failed but the calibration is still valid until the next bump test due date.

Force Bump (optional)

8. If the Force Bump option is enabled and the sensors are due have a bump test, the following screen displays.

If Force Bump is disabled, press \( \circ \) to continue with the startup self-tests.

Note

If BUMPCHK today displays again after performing a bump check, refer to Startup Troubleshooting.
Self-Test Pass
When the detector has passed all startup self-tests, it enters normal operation. The LCD displays the ambient gas readings.

The detector automatically begins
• recording the peak (maximum) gas exposure,
• calculating the short-term exposure level (STEL), and
• calculating the time-weighted average (TWA) exposures.

Self-Test Fail
If the following error message displays after entering normal operation, refer to Startup Troubleshooting.

Battery Test
The battery is tested when the detector is activated and continuously thereafter. See Specifications for Battery Runtimes.

• Battery power is continually displayed during normal operation. If battery power is low, ALARM and ♂ flashes. The detector performs a sequence of 10 rapid sirens and alternating flashes with 7 seconds of silence in between (continues for 15 minutes).
• If battery power becomes critically low, ALARM and LOW BAT display. The detector performs a sequence of 10 rapid sirens with 1 second of silence in between (sequence reactivates seven times). The detector then displays OFF and the detector deactivates.

Note
If enabled, Confidence Beep and IntelliFlash automatically deactivate during a low battery alarm. Refer to Confidence Beep.

Backlight
The backlight automatically activates
• during startup,
• when the pushbutton is pressed (then deactivates after 5 seconds), and
• when there is an alarm condition (unless Stealth is enabled).
Deactivating the Detector

To deactivate the detector, press and hold ø. The detector
• performs a sequence of two sirens with alternating flashes,
• vibrates,
• initiates the deactivation countdown, and
• displays OFF.

Note
If ø is released before the countdown is complete, the detector will not deactivate.

Installing Fleet Manager II

Fleet Manager II is required to configure the detector and sensors. And IR Link is also required. To purchase contact BW Technologies by Honeywell.

To install Fleet Manager II complete the following:

1. Install Fleet Manager II using the Fleet Manager CD-ROM (available with MicroDock II and the IR Link), or download (at no cost) from BW Technologies by Honeywell website: www.gasmonitors.com.
2. Follow the installation wizard.
3. When installation is complete, open Fleet Manager II.
4. Click Administration located on the left toolbar.
5. Click the Login/Logout button.
6. When the Password dialog box displays, enter Admin (password is case sensitive).

7. Click OK.

8. From the Devices toolbar, click **Configure Device via IR Link**.

9. When the Device Selection dialog box displays, select **GasAlertMicroClip Series** and click OK.

Fleet Manager II displays the **Sensors** tab that includes the following sections:

- Detector Identification
- CO, O₂, H₂S, LEL Sensor Configuration
- User Options
- Language Menu
Using Fleet Manager II to Configure the Detector

1. Activate the detector and wait for the startup tests to complete.
2. Connect the USB cable to the USB port on the computer.
3. Connect the USB cable to the IR Link.
4. Insert the IR link onto the IR interface on the back of the detector.
5. Open Fleet Manager II and access the Sensors tab. Refer to Installing Fleet Manager II.
6. From the Sensors tab, click Retrieve from Device at the bottom of the window.
The fields will populate with the detector’s current configurations.
7. Refer to the descriptions in the following sections to define settings and enable/disable options:
   • Detector Identification
   • Sensor Configuration (CO, O₂, H₂S, and LEL)
   • User Options
   • Language Menu
8. When configuration of new settings is complete, click Save to Device at the bottom of the window. The detector automatically updates with the new settings.

<table>
<thead>
<tr>
<th>Item</th>

<td>IR and charger interface</td>
</tr>
<tr>
<td>3</td>
<td>IR Link</td>
</tr>
</tbody>
</table>

Table 6: Connecting to the IR Link
Detector Identification

The Detector Identification section provides information about the detector, current firmware revision, and hardware revision. Data can also be entered (25 characters per line) to display as a startup message on the detector LCD each time it is activated.

Serial Number

Enter the serial number of the detector. The serial number is located on the back of the detector. The serial number is listed above the S: bar code. This cannot be altered.

KA410-1020739

S:  

Note

GasAlertMicroClip serial numbers use the KA serial number prefix.

Hardware/Firmware Revision

Hardware/Firmware Revision cannot be altered. The field automatically populates when data is retrieved from the detector. If new firmware is downloaded to the detector, the field automatically updates when data is retrieved.

The firmware version displays on the detector LCD during the startup self-tests.

Startup Message

Enter text (25 characters per line) to display on the detector LCD during startup. Enter information such as employee name, plant, area, emergency numbers, etc.

Depending upon the length of the message, it will either

a) display on the LCD for 3 seconds (shorter message), or
b) scroll twice on the LCD (longer message).
**Sensor Configuration**

Settings for the sensors are configured individually. Enter values or enable/disable options. Refer to Factory Gas Alarm Setpoints for setpoint values.

*Note*

*Depending upon the sensor, the options may vary.*

![Figure 4. CO Sensor Configuration](image)

**Sensor Disabled**

⚠️ **Warning**

Use extreme caution when disabling a sensor. The disabled sensor cannot detect and alarm against the applicable gas.

1. Click **Retrieve from Device** to populate the fields with the current detector settings.
2. Click the **Disabled** checkbox for the required sensor.

![Figure 5. Disabled Sensor](image)

The fields for the applicable sensor become inactive (greyed out) until the sensor is again enabled.
3. Click the **Save to Device** button located at the bottom of the window.

4. The detector LCD automatically updates. The gas type and sensor readings no longer display on the LCD for the applicable sensor.

5. Enable the sensor as soon as possible. If the sensor is damaged, replace it immediately. Refer to Replacing a Sensor or Sensor Filter.

**Calibration Gas Concentration**

⚠️ **Caution**

The gas concentration value entered in Fleet Manager II must match the gas concentration value on the gas cylinder.

1. Refer to the following list of recommended gas mixtures:
   - CO: 100 ppm balance N₂
   - H₂S: 25 ppm balance N₂
   - LEL: 50% LEL or 2.5% by vol. methane balance air
   - O₂: 20.9% balanced with N₂
2. Select/enter the gas concentration value in the **Calibration Gas** field of the applicable sensor.

**Calibration Interval**

⚠️ **Caution**

BW recommends that the sensors be calibrated once every 180 days (6 months).

Define how often a sensor should be calibrated in the **Calibration Interval** field. A different calibration interval can be defined for each sensor.

1. Enter the value (0-365 days) for each sensor.
2. Enter 0 to disable the calibration interval option. Entering zero automatically deactivates the **Force Calibration When Overdue** user option.

The detector is shipped with the factory default set to 180 days.

**Bump Interval**

Define how often a bump check should be performed for each sensor in the **Bump Interval** field. A different bump interval can be defined for each sensor.

1. Enter the value (0-365 days) for each sensor.
2. Enter 0 to disable the **Bump Interval** option. Entering 0 automatically disables the **Force Bump When Overdue** option.

The detector is shipped with the factory default set to 0 days.

**Note**

BW recommends to bump test the sensors before each day’s use to confirm their ability to respond to gas by exposing the detector to a gas concentration that exceeds the alarm setpoints. Verify that the audible and visual alarms activate. Calibrate if the readings are not within the specified limits.
**Low Alarm**

Enter the low alarm setpoints for each sensor. Refer to Factory Gas Alarm Setpoints for factory defined alarm setpoints. Applicable to all sensors.

**High Alarm**

Enter the high alarm setpoints for each sensor. Refer to Factory Gas Alarm Setpoints for factory defined alarm setpoints. Applicable to all sensors.

**TWA Alarm**

The time-weighted average (TWA) is a safety measure used to determine accumulated average exposure to gases. An average is determined using the US Occupational Safety and Health Administration (OSHA) method to ensure the worker is warned when the maximum average is accumulated.

The US OSHA method is defined as a moving average that accumulates over an 8-hour average. If the worker is in the field longer, the oldest accumulated values (first hour) are replaced by the newest values (ninth hour). This continues for the duration of the work shift until the detector is deactivated.

TWA Alarm applies to CO and H₂S sensors only.

1. Refer to Factory Gas Alarm Setpoints for the factory alarm setpoints.
2. Enter the setpoint in the TWA Alarm field.

**STEL Alarm**

The short-term exposure limit (STEL) is the maximum permissible gas concentration a worker can safely be exposed to for short periods of time (5-15 minutes maximum).

STEL Alarm applies to CO and H₂S sensors only.

**Note**

Standard factory Alarm Setpoints vary by region. Refer to Factory Gas Alarm Setpoints for OSHA factory settings.

1. Refer to the applicable regulatory requirements in your area for defining STEL alarm setpoints.
2. Enter the setpoint for the CO and H₂S sensor in the STEL Alarm field. Proceed to STEL Interval.

**STEL Interval**

STEL Interval provides protection for workers from over exposure to high concentrations of gas, and is based on used-defined 5-15 minute intervals. When the maximum STEL is reached, the detector alarms to notify the worker.

⚠️ **Caution**

Follow all safety procedures as defined by your employer.

Enter the interval (5-15 minutes) in the STEL Interval field. The detector is shipped with the factory default setting of 15 minutes.

**Auto Zero on Startup**

When enabled, the sensors automatically zero during the startup self-tests. The Auto-Zero on Startup option is available for the CO, H₂S, and LEL sensors. Not applicable to O₂.

1. Click the checkbox of each sensor that will be auto zeroed during startup.

The detector is shipped with the Auto-Zero on Start-up option enabled for the CO, H₂S, and LEL sensor.

**O₂ Auto-Calibration on Startup (Automatic O₂ Calibration)**

When enabled, the O₂ sensor is automatically calibrated during the startup self-tests.

The detector is shipped with the O₂ Auto-Calibration on Startup option enabled.

**LEL By Vol CH₄**

When enabled, the detector displays the LEL value as CH₄%, assuming a methane environment.

The LEL By Vol CH₄ option is applicable to the LEL sensor only. The detector is shipped with the LEL by Vol CH₄ disabled.
User Options

The user options section provides detector features that can be enabled or disabled. The green checkmark indicates the option is enabled. Click the checkbox to disable the option.

![User Options]

**Latching Alarms**

When enabled, a low alarm persists until the alarm is acknowledged and gas concentrations are below the low alarm setpoint. The audible alarm can be temporarily deactivated by pressing \( \square \), but the LCD continues to display the peak concentration values until the alarm condition no longer exists.

The detector is shipped with **Latching Alarms** disabled.

**Safe Mode**

When enabled, **SAFE** displays continuously on the LCD unless an alarm condition occurs. **Safe Mode** provides visual confirmation that no (monitored) hazardous gas is present.

![SAFE Mode]

The detector is shipped with **Safe Mode** disabled.
**Stealth Mode**

When enabled, the backlight, visual alarms, and audible alarms are disabled. 📲 displays continuously on the LCD.

During an alarm, the vibrator activates and readings display on the LCD. The detector is shipped with **Stealth Mode** disabled.

---

**Low Alarm Acknowledge**

When enabled, the audible alarm can be deactivated during a low alarm for the CO, H₂S, and LEL sensors. The LED and visual alarm indicators remain active until the alarm condition changes or the detector deactivates.

Press ○ to acknowledge the low alarm and deactivate the audible alarm.

*Note*

**Low Alarm Acknowledge** is not applicable to O₂.

The detector is shipped with **Low Alarm Acknowledge** disabled.
**Force Calibration When Overdue**

When enabled, if a sensor(s) is past due, the sensor(s) must be calibrated immediately, otherwise the detector deactivates.

Enable **Force Calibration When Overdue** to ensure calibrations are performed regularly and sensors are operating correctly. The following screen displays during the startup sequence when the option is enabled and the sensor(s) is overdue.

To enable **Force Calibration When Overdue**, complete the following:

1. Click the **Force Calibration When Overdue** checkbox to enable.
2. Enter a value (1-365 days) in the **Calibration Interval** (Cal Interval) field.

   △ Caution

   If 0 (zero) is entered in the Cal Interval field, the Force Calibration When Overdue option is automatically disabled.

The detector is shipped with **Force Calibration When Overdue** disabled.

For more information, refer to **Calibration**.

---

**Cal Lock (Calibration IR Lock)**

When enabled, the sensors can only be calibrated using an infrared (IR) device to ensure calibrations are recorded. The following are IR devices:

- IR Link with Fleet Manager (refer to Connecting to the IR Link),
- MicroDock II base station (refer to the **MicroDock II User Manual**).

If **Cal Lock** is enabled and calibration is attempted, the following screen displays.

**Note**

*If Cal Lock is enabled, the detector will still auto zero the sensors.*

*The detector is shipped with Cal Lock disabled.*

---

**Force Bump When Overdue**

When enabled, if a sensor(s) is past due for a bump test, the sensor(s) must be bump tested immediately, otherwise the detector deactivates.

A bump test should be performed regularly to ensure the sensors are responding correctly to gas. The following screen displays when the option is enabled and the sensor(s) is overdue.
To enable Force Bump When Overdue, complete the following:

1. Click the Force Bump When Overdue checkbox to enable.
2. Enter a value (1-365 days) in the Bump Interval field.

⚠️ Caution
If 0 is entered in the Bump Interval field, the Force Bump When Overdue option is automatically disabled.

The detector is shipped with Force Bump When Overdue disabled. For information and procedures, refer to Bump Test.

### Confidence Beep

When enabled, the confidence beep provides continuous audible confirmation that the detector is operating correctly by beeping once every second.

**Note**

Confidence beep automatically disables during a low battery alarm, a self-test fail, a calibration fail, a bump test fail, or during an alarm event.

To define how often Confidence Beep occurs (1-60 seconds), refer to Confidence Beep and IntelliFlash Interval. Default setting is 1 second. The detector is shipped with the Confidence Beep disabled.

### IntelliFlash

When enabled, the green LED flashes to provide continuous visual confirmation that the detector is operating correctly.

**Note**

IntelliFlash is only applicable to GasAlertMicroClip XT, XL and X3.

IntelliFlash automatically deactivates during a low battery alarm, a self-test fail, a calibration fail, a bump test fail, or during an alarm event.

To define how often IntelliFlash occurs (1-60 seconds), refer to Confidence Beep and IntelliFlash Interval. Default interval is 1 second. The detector is shipped with IntelliFlash enabled.
**Datalog Interval**

Enter a value **(1-120 seconds)**. The default datalog interval is one reading every **15 seconds**.

**Confidence Beep and IntelliFlash Interval**

Enter a value **(1-60 seconds)** to define how often IntelliFlash occurs and the detector beeps. IntelliFlash and/or Confidence Beep must be enabled in order to define Confidence Beep and IntelliFlash Interval. Refer to **Confidence Beep and IntelliFlash Interval**. Default interval is **1 second**.

*Note
IntelliFlash and IntelliFlash Interval are only applicable to GasAlertMicroClip XT, XL and X3.*

**Language Menu**

The detector can display warnings and notifications in five different languages. Refer to the following illustration.

Click a language. When the settings are saved to the detector, the LCD displays warnings and notifications in the selected language.

The detector is shipped with **English** as the default language.
Alarms

Table 7. describes the detector alarms and corresponding screens. During an alarm condition, the detector activates the backlight, audible/visual/vibrator alarms, and displays the current ambient readings. If more than one type or level of alarm occurs simultaneously, a multi-gas alarm results. If Stealth is enabled, the audible and visual alarms are disabled, and only the vibrator alarm activates.

To change the factory-defined alarm setpoints, refer to Low Alarm, High Alarm, TWA Alarm, and STEL Alarm.

<table>

<tr>
<td>• Vibrator alarm activates</td>
<td><img src="image3" alt="High Alarm Screen" /></td>
<td>• Vibrator alarm activates</td>
<td><img src="image4" alt="STEL Alarm Screen" /></td>
</tr>
</tbody>
</table>

**Note**

*If Low Alarm Acknowledge* is enabled, the audible alarm can be disabled during a low alarm condition. The vibrator and visual alarm indicators remain active until the alarm condition changes or the detector deactivates. Press ○ to acknowledge the low alarm and deactivate the audible alarm. If the alarm escalates to a high, TWA, or STEL alarm, the audible alarm reactivates.

*If enabled, Latched Alarms* causes the low and high gas alarms (audible, visual, and vibrator) to persist until the alarm is acknowledged (by pressing ○) and the gas concentration is below the low alarm setpoint. The LCD displays the peak concentration and the audible, visual, and vibrator indicators persist until the alarm condition no longer exists. Enable/disable **Latching Alarms** in Fleet Manager II. Local regulations may require **Latching Alarms** be enabled.
### GasAlertMicroClip

**Computed Gas Exposures**

⚠️ **Warning**

To avoid possible personal injury, do not deactivate the detector during a work shift. TWA, STEL, and MAX readings reset once the detector is deactivated.

**Table 8. Computed Gas Exposures**

<table>
<thead>
<tr>
<th>Gas Exposures</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TWA (H₂S and CO only)</td>
<td>Time-weighted average (TWA) based on accumulated exposure to toxic gases averaged over a workday according to US OSHA method. OSHA: 8 hour moving average</td>
</tr>
<tr>
<td>STEL (H₂S and CO only)</td>
<td>Short-term exposure limit (STEL) to gas based on a 5-15 minute user-defined period.</td>
</tr>
<tr>
<td>Peak* (maximum)</td>
<td>Peak concentration encountered during work shift.</td>
</tr>
</tbody>
</table>

* For oxygen, it is the highest or the lowest concentration encountered.

**Viewing Gas Exposures**

To view the TWA, STEL, and peak (maximum) readings, press ○ twice. The LCD first displays the TWA gas exposures.

Then the LCD displays the STEL gas exposures.

Finally the LCD displays the peak (maximum) readings.
**Clearing Gas Exposures**

⚠️ Caution

Follow all safety procedures as defined by your employer. Confirm with your supervisor before clearing TWA and STEL alarms.

To clear the TWA, STEL, and peak exposure readings, press ⚪ when the LCD displays **RESET**.

**Gas Alarm Setpoints**

Gas alarms are activated when detected gas concentrations are above or below the user-defined setpoints. Gas alarms are described below.

<table>
<thead>
<tr>
<th>Alarm</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Low</td>
<td><strong>Toxics and combustibles:</strong> Ambient gas level above low alarm setpoint.</td>
</tr>
<tr>
<td></td>
<td><strong>Oxygen:</strong> Ambient gas level may be set above or below 20.9% (or 20.8%).</td>
</tr>
<tr>
<td>High</td>
<td><strong>Toxics and combustibles:</strong> Ambient gas level above high alarm setpoint.</td>
</tr>

Note
To disable an alarm, set the alarm setpoint to 0 (zero) in Fleet Manager II. Refer to Using Fleet Manager II to Configure the Detector for complete instructions.

Changing Alarm Setpoints

To change alarm setpoints, use the base station or IR Link and refer to the following under Sensor Configuration:
- Low Alarm
- High Alarm
- TWA Alarm
- STEL Alarm

Stopping a Gas Alarm

The low and high alarms stop when the ambient gas concentration returns to the acceptable range.

Note
If alarms are set to latch, press ○ to reset the alarms.

The detector calculates the TWA value based on OSHA standards and the STEL value based on a user-defined 5 to 15 minute period. Refer to STEL Interval.

To stop a TWA or STEL alarm, perform one of the following:
1. Deactivate and reactivate the detector.
2. Reset the TWA/STEL/peak exposure readings. Refer to Viewing Gas Exposures).

⚠️ Warning
Follow all safety procedures as defined by your employer. Confirm with your supervisor before clearing TWA and STEL alarms.
**Sensor Alarm**

The detector tests for missing or defective sensors during the startup self-test and continuously thereafter.

- During start-up if a sensor fails, **Error** and the sensor name displays.
- If a sensor fails the self-test, **Err** displays above the gas type of the failed sensor. The detector will enter alarm. Press 0 to acknowledge the sensor alarm and stoop the alarm. Refer to **Troubleshooting**.

**Low Battery Alarm**

- Battery power is continually displayed during normal operation. If battery power is low, **ALARM** and  flashes. The detector performs a sequence of 10 rapid sirens and alternating flashes with 7 seconds of silence in between (continues for 15 minutes).

- If battery power becomes critically low, **ALARM** and **LOW BAT** display. The detector performs a sequence of 10 rapid sirens with 1 second of silence in between (sequence reactivates seven times). The detector then displays **OFF** and the detector deactivates.

Charge the battery immediately. Refer to **Charging the Battery**.

**Note**

*Confidence Beep automatically disables during a low battery alarm.*

**Automatic Deactivation Alarm**

An automatic deactivation alarm will occur if

- the battery voltage is too low to operate the detector,
- calibration is due but not performed (when the **Force Calibration** option is enabled),
- bump test is due but not performed (when the **Force Bump** option is enabled) and
- all sensors fail during the startup self-test.

The detector performs a sequence of 10 rapid sirens with alternating flashes with 1 second of silence in between (sequence reactivates seven times). **OFF** then displays and the detector deactivates.
Bump Test

Gas Cylinder Guidelines (Bump Test)

- To ensure an accurate bump check, use a premium-grade gas. Use gases approved by the National Institute of Standards and Technology.
- Do not use a gas cylinder that is past its expiration date.

Gas Cylinder Connection

1. Connect the calibration hose to the 0.5 l/min regulator on the gas cylinder. For use with the MicroDock II, use a demand flow regulator.

   NOTE: Cylinders that are used with a demand flow regulator must meet the following maximum inlet pressure specifications:
   - Disposable cylinders 0-1000 psig/70 bar
   - Refillable cylinders 0-3000 psig/207 bar

   To perform an automated bump check, refer to the MicroDock II User Manual.

2. Connect the calibration hose to the calibration cap.

3. Attach the calibration cap to the detector.

4. Apply gas. Verify the visual and audible alarms activate.

5. Close the regulator and remove the calibration cap from the detector.
   NOTE: The detector will temporarily remain in alarm until the gas clears from the sensors.

6. Disconnect the hose from the calibration cap and the regulator.
Calibration

Guidelines

When calibrating the detector, adhere to the following guidelines:

- **Recommended gas mixture:**
  - CO: 100 ppm balance N₂
  - H₂S: 25 ppm balance N₂
  - LEL: 50% LEL or 2.5% for NA (2.2% for EU) by vol. methane balance air
  - O₂: 18% by volume, balance N₂.

- To ensure accurate calibration, use a premium-grade calibration gas. Gases approved by the National Institute of Standards and Technology (NIST) improve the accuracy of the calibration.
- Do not use a gas cylinder past its expiration date.
- Calibrate a new sensor before use. Install the sensor, activate the detector, and allow the sensor to stabilize before starting calibration (used sensor: 60 seconds / new sensor: 5 minutes, for X3 O₂ stabilization takes 60 minutes).
- Calibrate the sensors at least once every 180 days, depending on use and sensor exposure to poisons and contaminants.
- Calibrate the detector if the gas readings varies during startup.
- Calibrate the sensor before defining the alarm setpoints.
- Calibrate only in a safe area that is free of hazardous gas in an atmosphere of 20.9% oxygen.
- Do not calibrate the detector during or immediately after charging is complete.
- The oxygen sensor can be automatically calibrated each time upon activation (if this feature is enabled). Activate the detector in a normal (20.9%/20.8% oxygen) atmosphere.

- Allow the detector to stabilize for 1 minute after activation before performing a calibration or bump test.
- If a certified calibration is required, contact BW Technologies by Honeywell.

Diagnostics Test

The detector tests the air (auto zero) and the span gas that is applied (auto span) to ensure it meets expected values. Auto zero sets the zero-gas level of the sensor.

**Auto Zero:** If target gas is present, the zero level will be incorrect and the sensor will fail. If a sensor fails, an error message displays.

**Auto Span:** If the target gas does not meet expected values, an error message displays.

A sensors that fails to span retains the previous span value, and does not continue with the calibration process.
Connecting the Gas Cylinder to the Detector

Refer to the following Figure 7., Table 11., and procedures to connect the gas cylinder to the detector for calibration.

Note
Wind currents may cause false readings and poor calibrations.

Table 11. Connecting the Gas Cylinder to the Detector

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Calibration cap</td>
</tr>
<tr>
<td>2</td>
<td>Calibration hose</td>
</tr>
<tr>
<td>3</td>
<td>Gas cylinder with 0.5 ml/min regulator</td>
</tr>
</tbody>
</table>

Read the following steps (1-7) before beginning calibration.

1. Verify the calibration gas being used matches the span concentration value(s) that are set for the detector. Refer to Calibration Gas in Fleet Manager II.
2. Attach a 0.5 ml/min regulator to the gas cylinder. To perform an automated calibration, use a demand flow regulator and refer to the MicroDock II User Manual.
3. Connect the calibration hose to the calibration cap.
4. Connect the other end of the calibration hose to the regulator on the gas cylinder.
5. Refer to Calibration Setup to apply gas.
6. When calibration is complete turn off gas and disconnect the hose from the calibration cap and regulator.
7. Ensure the gas cylinder is stored according to the manufacturer’s specifications.
Calibration Setup

The following calibration procedures are written as calibration performance is intended. If an error or failure occurs, refer to Calibration Troubleshooting.

⚠️ Caution

Only calibrate in a fresh air environment and in a safe area. Do not calibrate the detector during or immediately after charging.

>Note

Calibration can be aborted at any time. To abort calibration, press ○. The following screen displays.

![ABORTED]

Setting Span Gas Concentration Values

1. Activate the detector and allow startup to complete.
2. Connect the IR Link to the computer
3. Insert the IR Link into the IR interface on the back of the detector.
4. On the PC, open Fleet Manager II.
5. Login to the Administration functions. From the Devices toolbar, click Configure Device via IR Link and select GasAlertMicroClip.
6. Click Retrieve From Device. The fields populate with the detector’s current settings.
7. Refer to Calibration Gas Concentration for span gas values.
8. Ensure the sensors to be calibrated are enabled in Fleet Manager II.
9. Using , select the concentration value(s) in the Calibration Gas field for each sensor. The values entered in Fleet Manager II must match the gas concentration values on the gas cylinder.
10. Click Save To Device to save the settings to the detector.

Connecting to the IR Link
Calibrating with the IR Link

⚠️ Caution

Only calibrate in a fresh air environment and in a safe area. Do not calibrate the detector during or immediately after charging.

To calibrate the detector with the IR Link, complete the following procedure:

1. Complete steps #1-10 under Setting Span Gas Concentration Values.
2. Click on the Device Operations tab.
3. Click Calibrate. The detector begins calibration. Refer to Auto Zero and Oxygen Sensor Calibration.

Calibration Procedure

⚠️ Caution

Only calibrate in a fresh air environment and in a safe area. Do not calibrate the detector during or immediately after charging.

1. Press and hold ○. The detector performs the OFF countdown. Continue holding ○ as the detector briefly deactivates.

2. The detector then reactivates and performs the CAL countdown. Continue holding ○ until the CAL countdown is complete.

Note

If ○ is not held for the entire countdown, the detector will deactivate.

Table 12: Connecting to the IR Link

<table>
<thead>
<tr>
<th>Item</th>

</tr>
<tr>
<td>3</td>
<td>IR Link</td>
</tr>
</tbody>
</table>
Auto Zero and Oxygen Sensor Calibration

Note
Do not apply calibration gas until **APPLY GAS** displays, otherwise the auto zero function will fail.

3. **AUTO-ZERO** flashes while the detector zeroes the combustible and toxic sensors, and calibrates the oxygen sensor.

   When auto zero is complete, the detector beeps twice.

**Auto Zero Successful**: If the sensors successfully zero, the detector proceeds to the **Auto Span** function.

**Auto Zero Unsuccessful**: If the sensors fail auto zero, an error message displays showing which sensor failed. Refer to **Calibration Troubleshooting**.

Auto Span

4. When auto zero is complete, **APPLY GAS** displays.

5. Attach the calibration cap to the detector. Refer to Figure 7. Open the valve on the regulator and apply gas at a flow rate of 250-500 ml/min.

   **ERROR** flashes and **AUTO-Span** displays
When a sufficient amount of gas has been detected (approximately 30 seconds after the gas has been applied), the detector beeps once, \( \text{AUTO-Span} \) flashes, and \( \text{ } \) remains lit while the detector completes the span (approximately 2 minutes).

**Successful Span**
If the sensors have spanned successfully, the detector beeps and the calibration procedure continues.

**Unsuccessful Span**
If any sensors fail the span, the following screen displays. Refer to [Calibration Troubleshooting](#).

**Calibration Due Date**

**Note**

If a sensor fails calibration, the next due date for that sensor will not reset. Refer to [Calibration Troubleshooting](#).

6. After calibration is complete, **CAL DUE** displays and all successfully calibrated sensors automatically reset the calibration due dates according to the calibration intervals in Fleet Manager II.

7. The number of days that displays is when the next sensor calibration should be performed.
Failed Sensor Past Calibration Due Date: If a sensor fails the span and it is past the calibration due date, the following three screens display.

1. Press $C$ to acknowledge the warning. The detector returns to normal operation.

Note

A negative number indicates that sensor is overdue for a calibration.

Verification

1. After calibration is complete and the detector returns to normal operation, verify the calibration using a gas cylinder other than the one used for calibration.
2. The gas concentration should not exceed the sensor's detection range. Confirm the LCD shows the expected concentration.
3. To ensure the readings are accurate, apply the verification gas for the same amount of time as was applied to the sensor when it was calibrated.

Example: $\text{H}_2\text{S}$ span time 2 minutes therefore, apply verification gas for 2 minutes.
**Datalogs**

The detector records various information that can be compiled to create a report. The detector is capable of storing 16 hours of information (when recording a datalog every 15 seconds). When the memory is full, the detector replaces the oldest datalogs with the most recent datalogs.

**Event Logs**

The detector records the 10 most recent gas alarm events. The following information is recorded:

- Serial number of the detector
- Start time of alarm
- Type, level and duration of alarm
- Peak exposure level (ppm or %)
- Status of the sensor

**Downloading Datalogs and Event Logs**

The datalog and event log files can only be downloaded to a PC using an IR Link or the MicroDock II base station. Refer to the *Fleet Manager II Operator’s Manual* or *MicroDock II User Manual*.

**Software Requirements**

To create spreadsheet reports of event logs, datalogs, and bump and calibration results, the following software applications are required:

- Fleet Manager II, and
- Microsoft Excel.
Maintenance
To maintain the detector in good operating condition, perform the following basic maintenance as required.

- Calibrate, bump check, and inspect the detector at regular intervals.
- Maintain an operations log of all maintenance, bump checks, calibrations, and alarm events.
- Clean the exterior with a soft damp cloth. Do not use solvents, soaps, or polishes.
- Do not immerse the detector in liquids.

Battery Cautions

⚠️ Warning
To avoid personal injury and/or property damage, adhere to the following:

- The detector must be deactivated to charge the battery.
- Charge the battery immediately when the detector emits a low battery alarm. Refer to Charging the Battery.
- Charge the battery in a safe area that is free of hazardous gas in temperatures of 32°F to 113°F (0°C to 45°C).
- Charge the battery using the BW Multi-Unit Cradle Charger or charger adapter only. Do not use any other charging adapters. Failure to adhere to this caution can lead to fire and/or explosion.
- The charging adapter is voltage specific to your region. Use of the charging adapter outside your region will damage the charger and the detector.
- Do not calibrate the detector during or immediately after charging the battery.

- The battery can only be replaced by the manufacturer. Failure to adhere to this caution can lead to fire and/or explosion.
- Warning: The GasAlertMicroClip uses a lithium battery that may present a risk of fire or chemical burn hazard if misused. Do not disassemble, heat above 212° (100°C), or incinerate.
- Warning: Lithium polymer cells exposed to heat at 266°F (130°C) for 10 minutes can cause fire and/or explosion.
Charging the Battery

To charge the battery, refer to Figure 8., Table 13., and the following procedures (1-8).

Warning

The detector must be charged in a safe area that is free of hazardous gas in temperatures of 32°F to 113°F (0°C to 45°C).

1. Deactivate the detector.
2. Plug the charging adapter into an AC outlet.

Caution

The charging adapter is voltage specific to your region. Use of the charging adapter outside your region will damage the charger and the detector.

3. Attach the charging adapter to the charger interface. Refer to Figure 8.
4. Allow the battery to charge per battery specifications. The charging indicator flashes on the LCD while the detector is being charged.

Table 13. Connecting the Charging Adapter

<table>
<thead>

<td>Charging cable</td>
</tr>
</tbody>
</table>

⚠️ Warning

The detector must be charged in a safe area that is free of hazardous gas in temperatures of 32°F to 113°F (0°C to 45°C).

1. Deactivate the detector.
2. Plug the charging adapter into an AC outlet.

⚠️ Caution

The charging adapter is voltage specific to your region. Use of the charging adapter outside your region will damage the charger and the detector.

3. Attach the charging adapter to the charger interface. Refer to Figure 8.
4. Allow the battery to charge per battery specifications. The charging indicator flashes on the LCD while the detector is being charged.

![Battery Indicator](image)
5. When charging is complete, the charging indicator stops flashing and displays to indicate a full charge. Remove the charging adapter and activate the detector.

If the battery indicator does not display, refer to Troubleshooting.

6. Charge the battery after each workday.

Note

To reach full battery capacity, allow the battery to fully charge and fully discharge three times.

Charging the detector in temperatures above 113°F (45°C) will greatly reduce the number of charges the detector can accept. The detector may be warm immediately following charging. This is normal.

Replacing a Sensor or Sensor Filter

⚠️ Warning

To avoid personal injury, only use sensors that are specifically designed for the detector. Refer to Replacement Parts and Accessories.

Use proper ESD handling practices.

• Each sensor has a high degree of resistance to common vapors and gases. To clear a sensor, move the detector to a non-hazardous environment and wait 10 to 30 minutes.

• Do not expose a sensor to vapors of inorganic solvents such as fumes from paint thinners, or organic solvents such as benzoic acids and acrylic acids.

• Ensure hands are clean or wear gloves before handling components.

To replace a sensor or sensor filter, refer to

• Table 14,
• Figure 11,
• Figure 12
• Figure 13, and
• the following procedures.
**Removing the back shell**

1. Deactivate the detector. On a clean surface, place the detector face down.
2. Remove the six machine screws on the rear shell.
3. Remove the back cover by lifting the top and the bottom upwards simultaneously to prevent damaging the charger pins.

---

Replacing the Sensor Filter

1. Note the placement of the PCB to ensure it is replaced correctly. Remove the two screws on the PCB. Remove the PCB carefully.

⚠️ Caution

Ensure no damage occurs to the battery.

2. Remove the old sensor filter. It may be stuck to the sensors.

3. Pull the liner tab, if present, to remove the liner from the sensor filter. Do not fold the sensor filter.

4. Verify that the black gasket is facing the front shell and the large diameter circle on the gasket is aligned with the large circle on the front shell.

5. Place the gasket as shown, and then use your fingers to apply even pressure to the entire gasket.

6. To reassemble the detector, refer to Reassembling the detector.
Replacing the H₂S, CO, and LEL sensor

1. Note the placement of the PCB to ensure it is replaced correctly. Remove the two screws on the PCB. Remove the PCB carefully.

   △ Caution
   Ensure no damage occurs to the battery.

   If the sensor filter is stuck to the sensors, remove and replace the sensor filter into the front shell.

2. Slide the sensors out.

   Note
   Detectors that are configured for 1, 2, or 3 gases may contain a dummy sensor in one of the four sensor locations.

3. Insert the new sensor(s). For sensor positioning, refer to Figure 11.

   Note: The Oxygen sensor is located in the bottom left corner of the detector.

4. To complete the detector, refer to Reassembling the detector.

Figure 11. Sensor Positioning
**Replacing the Oxygen Sensor XT and XL**

Note: Detectors that are configured for 1, 2, or 3 gases may contain a dummy sensor in one of the four sensor locations.

1. Gently remove the circular rigidified flex PCB atop the sensor from the metal sensor posts. Take care not to tear the flex cable.

2. Note the placement of the PCB to ensure it is replaced correctly. Remove the two screws on the PCB.

⚠️ **Caution**

Ensure no damage occurs to the battery.

3. Lift the PCB straight up. The oxygen sensor will stay in the front shell. Remove the sensor.

4. On roughly the same spot on the front shell, place the new sensor. Lower the PCB over the oxygen sensor.

5. Carefully replace the circular rigidified flex PCB atop the metal sensor posts. Ensure the plastic sensor post is inserted into the clear plastic hole. Take care not to tear the flex cable.

6. Press down to secure the circular rigidified flex PCB atop the metal sensor posts. Take care not to press down too hard and accidentally activate the detector.

7. To complete the detector, refer to Reassembling the detector.

---

**Replacing the Oxygen Sensor X3**

Note: Detectors that are configured for 1, 2, or 3 gases may contain a dummy sensor in one of the four sensor locations.

1. Gently remove the circular rigidified flex PCB atop the sensor from the metal sensor posts. Take care not to tear the flex cable.

2. Note the placement of the PCB to ensure it is replaced correctly. Remove the two screws on the PCB.

⚠️ **Caution**

Ensure no damage occurs to the battery.

3. Lift the PCB straight up. The oxygen sensor will stay in the front shell. Remove the sensor.

4. On roughly the same spot on the front shell, place the new sensor. Lower the PCB over the oxygen sensor.

5. Carefully replace the circular rigidified flex PCB atop the metal sensor posts. Take care not to tear the flex cable.

6. Press down to secure the circular rigidified flex PCB atop the metal sensor posts. Take care not to press down too hard and accidentally activate the detector.

7. To complete the detector, refer to Reassembling the detector.
Reassembling the detector

1. To re-assemble the detector, perform the following:
   • Verify the PCB is seated correctly and inserted exactly as it was removed (sensors facing the front shell).
   • Replace the two PCB screws.
   • Visually inspect the battery to ensure no damage has occurred.
   • When replacing the rear shell, ensure the charging pins (bottom of inside rear shell) are aligned with the corresponding holes on the PCB. If the contact pins are bent, the battery will not charge correctly.

   Note

   Ensure the rib on the interior rear shell 1 inserts between the battery and the PCB 2.

Figure 14. Replacing the Rear Shell
• Press the front and rear shells together firmly to ensure a proper seal. Ensure the front and rear shell have a uniform, tight 1/16 in (1 mm) seal on all sides of the detector.

• When replacing the screws, they must be seated properly to prevent cross threading. Turn the screw counter-clockwise until a click is heard and then begin tightening the screw clockwise.

2. New sensors must be calibrated. Activate the detector and calibrate the sensor(s). Refer to Calibration.
**Troubleshooting**

If a problem occurs, refer to the solutions in the Troubleshooting section. If the problem persists, contact BW Technologies by Honeywell.

Specifications

Instrument dimensions:
**XT:** 11.25 x 6.00 x 2.89 cm (4.4 x 2.4 x 1.1 in.)
**XL-X3:** 11.25 x 6.00 x 3.22 cm (4.4 x 2.4 x 1.2 in.)

Weight:
**XT:** 170 g (6.0 oz.)
**XL:** 190 g (6.7 oz.)
**X3:** 179 g (6.3 oz.)

Operating temperature: -4°F to +122°F (-20°C to +50°C)
Storage temperature: -40°F to +122°F (-40°C to +50°C)
Operating humidity: 0% to 95% relative humidity (non-condensing)

Alarm setpoints: May vary by region and are user defined. All setpoints automatically display during the startup self-test.

Detection range:
H₂S: 0 – 100 ppm (1 / 0.1 ppm increments)
CO: 0 – 500 ppm (1 ppm increments)
O₂: 0 – 30.0% vol. (0.1% vol. increments)
Combustible (LEL): 0% to 100% LEL (1% LEL increments) or 0.0% to 5.0% v/v methane

Alarm conditions: TWA alarm, STEL alarm, low alarm, high alarm, multi-gas alarm, over limit (OL) alarm, low battery alarm, confidence beep, automatic deactivation alarm

Audible alarm: 95 dB at 30 cm (1 ft.) (100 dB typical) variable pulsed beeper

Visual alarm: Red light-emitting diodes (LED)

Display: Alphanumeric liquid crystal display (LCD)

Backlight: Activates when the pushbutton is pressed and deactivates after 5 seconds; also activates during an alarm condition

Self-test: Initiated upon activation

Calibration: Automatic zero and automatic span

Oxygen sensor: Automatic span upon activation (enable/disable)

User field options: Startup message, Confidence Beep, latching alarms, enable/disable safe display mode, oxygen measurement, combustible sensor measurement, sensor disable, define calibration interval, force calibration, calibration lock, force bump, define bump interval, bump due lock, stealth mode, low alarm acknowledge, language selection, enable/disable automatic oxygen calibration, enable/disable auto zero at startup, define alarm setpoints, span concentration values, define STEL calculation period, IntelliFlash, and Confidence Beep and IntelliFlash Interval

</tbody>
</table>

*Approximately 20% capacity loss is normal with lithium polymer batteries after 500 charge cycles. Refer to the Operator’s Manual for additional information.

**Battery is guaranteed to have 12 hour runtime during warranty period under normal operating temperature of -4°F / -20°C to 122°F/50°C.

1ppm = 1 µmol/mol
Year of manufacture: The detector’s year of manufacture is determined from the serial number. The second and third number after the letters determines the year of manufacture

E.g.: KA410-000001 = 2010 year of manufacture

Approved battery:

Approved batteries for GasAlertMicroClip XT:
Narada NL 503759

Approved batteries for GasAlertMicroClip XL:
Narada NLP883759LT20

Approved batteries for GasAlertMicroClip X3:
Narada NLP883759LT20

Rechargeable battery Temperature code
Lithium polymer -20°C ≤ Ta ≤ +50°C T4

Battery charger: GasAlertMicroClip charging adapter

⚠️ Warning

Charge only in a safe area that is free of hazardous gas and within temperatures of 32°F to 113°F (0°C to 45°C) First-time charge:

XT: 2-3 hours
XL-X3: 5-6 hours

Normal charge:

XT: 2-3 hours
XL-X3: 5-6 hours

Warranty XT-XL: 2 years including sensors
Warranty X3: 3 years including sensors

Guarantee: Battery is guaranteed to have a 12 hour runtime during warranty period under the normal operating temperature of -4°F/-20°C to 122°F/50°C

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules and

ICES-003 Canadian EMI requirements. These limits are designed to
provide reasonable protection against harmful interference in a
residential installation. This equipment generates, uses and can radiate
radio frequency energy and, if not installed and used in accordance with
the instructions, may cause harmful interference to radio
communications. However, there is no guarantee that interference will
not occur in a particular installation. If this equipment does cause harmful
interference to radio or television reception, which can be determined by
turning the equipment off and on, the user is encouraged to try to correct
the interference by one of more of the following measures:
• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that
to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.

**General Datalogger Specifications**

**Storage:** 16 hours at 15-second intervals

**Memory type:** Wraparound memory ensures most recent data is always saved

**Datalog Interval:** The default interval is one reading every 15 seconds.
The user has the option to change the intervals to rates from 1 to
120 seconds.

**Data recorded:** All sensor readings, all alarm conditions, calibrations,
event flags, battery status, sensor status, confidence beep activation,
and detector status with the time and date for each reading and unit
serial number

**Operation:** Requires no user intervention (automatic)

**Compatible with:** Desktop PC computer or laptop

**Operating system:** Windows 2000 or higher

**Download via:** IR device (IR Link adapter or MicroDock II base station)

**Software required:**
• Fleet Manager II application,
• Microsoft Excel (optional) to create custom reports.
