

# SolarPak Setup Instructions

1. Loosen the four screws holding the two arms to the brackets on the back of the solar panel.
2. Loosen the two extra screws in the channels.
3. Remove the screw, washer, and nut at the end of each bracket, as well as the two extra screws. Then raise the two arms.
4. Line up the holes of the pole-mounting assembly with the holes at the ends of the two arms. Insert the hex screws. Slip the washers and nuts over the ends of the four screws.
5. Tighten all six screws with your fingers. Do not tighten them too much, since you will perform adjustments when the SolarPak is attached to a wall or pole.

## Pole Mounting

1. Align the bracket's two parts with the pole and insert the four hex screws.
2. Tighten the screws until the unit is snug, but can still be swiveled for adjustment.

Follow the instructions in the User's Guide for setting the correct solar panel tilt angle and north/south orientation. After making all adjustments, tighten all of the screws with the hex wrench.
